Greetings from PEC ACM to NSS :)

In line with the vision of new leadership of our society, we wanted to discuss about possibilities of collaboration. In a discussion between Arsh and me, we discussed the possibility of a collaborative effort into the Sparsh project of NSS that focuses on recording books for the blind children. As a society with main focus on solving real life problems using the domain knowledge of Computer Science; we, ACM CSS, a technical society of our college, were thinking of automating this process of reading out with some ML and AI models in collaboration with the NSS PEC and sending the proposal to the blind school situated Sector-36, Chandigarh. Now since NSS is the main PoC with the school, we wanted to present this as a joint project between our two societies. If NSS, however, doesn't want to participate in this project, we would make a generalized model for the same.

This will be really helpful and time saving for the blind students in the school in question, while also giving us a template to present to all future such schools as an open source solution. I sincerely believe that a combined effort into this project will ensure higher propensity of succeeding in the mission to solve real world problems.

Regards,
Arihant Chawla

Greetings

Thank You so much for thinking of us! We are glad to collaborate with you on this project which will influence the lives of many students who are visually impaired.

I believe it is a great initiative, and would love to be a part of it. Hope to start working on it as soon as possible.

Kind Regards
Arshdeep Singh
Secretary, NSS, PEC

Dear Arshdeep,

As discussed on gMeet held on 25 July, we're working on the prototype of the Text To Speech (TTS) and should be able to give a basic presentation and demo on the sample NSS provided by 10th August, 2020. I'll hit you up with doubts, if they present themselves as we make the prototype.

Thanks!
We're working on the prototype and we'll be ready to show you a proof of concept as well as a working demo by Monday evening. Please suggest a suitable time/date (if Monday doesn't work for you) in the next week (preferably in the first half of the week)

Regards,
Arihant
